Advantages of HerbiMORE+J:

- Manages metabolic stress during the transition period
- Increases milk and milk fat yield improves leukocyte function
- Enhances nutrient exchange between Mother and Calf
- Increases disease resistance & immunity, Acts as a primary energy source for Animal
- It guarantees a smooth calving process
- Modulates transcription factor expression, influencing immune cells with pro- or anti-inflammatory activities
- Plays a key role in controlling NF-kB, regulating proinflammatory cytokine synthesis
- Helps in lipid metabolism and FA oxidation
- It also controls uncontrolled inflammation during postpartum interval

HerbiMore+J, an advanced feed supplement blend, harnesses potent benefits to enhance both the health and productivity of cattle. This cutting-edge blend effectively manages stress levels during transition periods, significantly reducing the risk of abortion and supporting healthy pregnancies to ensure the reproductive well-being of your herd. Moreover, it facilitates improved nutrient exchange between mother and calf, fostering optimal growth and development in new-borns.

HerbiMORE+J also plays a pivotal role in inducing parturition, initiating lactation, and promoting the cognitive development of young calves. Additionally, it boosts disease resistance and aids digestion, thereby fortifying your herd against environmental challenges. In summary, HerbiMORE+ offers a comprehensive solution empowering cattle farmers to maximize productivity while prioritizing the overall health and well-being of their animals.
